Subject: 1/8/17 update
Date: Sunday, January 8, 2017 6:28:28 PM

9:00 this morning stirred the spent Weevil-Cide being deactivated and opened house for venting. This consisted of opening windows, all drawers within the house, refrigerator and freezer. Took down skirting from around the trailer and set up 2 fans on south end to enhance ventilation underneath the trailer.

12:30 entered the home and closed windows in preparation for the 4:00 monitoring. Stirred spent Weevil-Cide.

4:08 entered the home to conduct monitoring. All readings were 0.0 ppm (including clothes from the master closet that were bagged and headspace monitored), except refrigerator/freezer which had a reading of 0.1 ppm. Spent Weevil-Cide was monitored with reading of 0.1 ppm pre-stir and between 50-100 ppm post stir.

Today's high temperature was 53 degrees and tomorrow's high is expected to be 72.
